“Recent Infections in Brooklyn and Queens

As of March 19, 2019, there have been 181 confirmed cases of measles in Brooklyn and Queens since October. Most of these cases have involved members of the Orthodox Jewish community.

The initial child with measles was unvaccinated and acquired measles on a visit to Israel, where a large outbreak of the disease is occurring. Since then, there have been additional people from Brooklyn and Queens who were unvaccinated and acquired measles while in Israel. People who did not travel were also infected in Brooklyn or Rockland County.

The neighborhoods that are affected include:

Brooklyn

- Bensonhurst: 1 confirmed measles case (no new cases since November 2018)
- Borough Park: 46 confirmed measles cases (2 additional cases in the past week)
- Brighton Beach: 1 travel-related case
- Midwood/Marine Park: 2 confirmed measles case (no additional cases in the past week)
- Williamsburg: 130 confirmed measles cases (21 additional cases in the past week)

Queens

- Flushing: 1 travel-related case

If you plan to travel to Israel, protect yourself and your family against measles and get vaccinated with the measles-mumps-rubella (MMR) vaccine at least two weeks in advance of your trip. If you have traveled to Israel and you have a fever, cough, red eyes, runny nose and body rash, contact your

doctor. You should call your doctor before going to their office to prevent exposing other people to measles.”

“Measles Outbreak in WASHINGTON STATE - 2019

Measles in Washington has spread and health officials urge immunization. The Washington State Department of Health reminds people to take precautions to help stop the spread of measles.

If you have been exposed to measles and feel ill, stay home to help prevent the spread of the disease. Call your healthcare provider to ask about testing and advice. If you don't have a healthcare provider, call your [local health department](#). If you need help with getting access to health care, call the [Family Health Hotline](#) at 1-800-322-2588.”

OREGON:

“UPDATED: March 12, 2019, 6:30 pm

There have been [4 confirmed measles cases](#) in Oregon related to an [outbreak in Washington state](#). Three additional cases are not linked to the outbreak. Most Oregonians have been vaccinated against measles, and their risk is low. Measles is a highly contagious viral disease that spreads easily to people who are not immune. It poses the highest risk to pregnant women, infants under 12 months of age and people with weakened immune systems.

TEXAS:

“Measles – March 19, 2019

The Texas Department of State Health Services (DSHS) has confirmed 12 measles cases in Texas this year. DSHS is urging health care providers to consider measles when diagnosing patients because early identification, along with immunization, is key to preventing measles from spreading.”
