## Agenda:

- ▶ Purpose & Rules of Engagement
- ▶ 2019–nCoV “Coronavirus” Overview
- ▶ Invited Guests: Snohomish County, WA
- ▶ FirstWatch Situation Report
- ▶ Q&A (as time allows)

4

## Purpose:

- Overview/update of 2019–nCoV Activity worldwide
- Listen to guest speakers on select issues
- Receive FirstWatch SitRep on 2019–nCoV surveillance activity
- Share solutions regarding specific challenges posed by 2019–nCoV

5

## Rules of Engagement

- ▶ Session will conclude after 60 minutes
- ▶ Session materials can be sent to [eid@ParamedicChiefs.ca](mailto:eid@ParamedicChiefs.ca) for posting on Paramedic Chiefs of Canada website
- ▶ Please keep your comments brief

6

Journal News Organization ECNS Resources Certification Accreditation Legislation NAVIGATOR Instructor Science Members

News Section

**Novel coronavirus from Wuhan City, China (2019-nCoV)**

## IAED Recommendations:

Emergency dispatch agencies should immediately contact their EMS system's medical control authority and local public health department for direction on implementing enhanced screening of emergency medical callers and providing responding crews with early notification of symptomatic patients so proper personal protective equipment (PPE) can be used by all providers with close patient contact.

For MFDS-user agencies that implement medical dispatch enhanced screening procedures, the IAED recommends using the **Emerging Infectious Disease Surveillance (EIDS) Tool** for the following Chief Complaints:

**Sick Person (Protocol 26)**

**Breathing Problems (Protocol 6)**

Also, the **EIDS Tool** should be used for other Chief Complaints when the caller offers information that would lead the Emergency Medical Dispatcher (EMD) to suspect a respiratory-type illness.

For MFDS ProQA software users, the EIDS Tool can be launched manually from the ProQA screen by clicking the upper menu bar icon shown here:

Typically, the Tool is launched after the Determinant Code has been assigned, but it is accessible anytime the ProQA case is open.

The IAED is currently reviewing the EIDS Tool for further specific enhancements as needed.

Please check this site regularly for updates.

# IAED EIDS Questions for Use with Cards 6 & 36

Paramedic Chiefs of Canada  
Chefs Paramédics du Canada

**EMERGING INFECTIOUS DISEASE SURVEILLANCE TOOL (CORONAVIRUS/SRI/MERS/EBOLA)** **IAED**

**Listen carefully:**  
**Ask only in early phases when new flu, respiratory illness, or hemorrhagic fever is emerging from specific areas:**

- has s/he traveled in the last 21 days (if so, where?) \_\_\_\_\_
- Note:** (If travel timeframe questionable) Was it roughly within the past month?
- confirmed travel from a known infected ("hot") area
- contact with a person who has traveled from a known infected ("hot") area in the past 21 days
- contact with someone with the flu or flu-like symptoms (if so, when?) \_\_\_\_\_

**Now tell me if s/he has any of the following symptoms:**

- measured body temperature  $\geq 100.4^{\circ}\text{F}$  ( $38.0^{\circ}\text{C}$ )
- fever (hot to the touch in room temperature)
- chills
- unusual sweats
- unusual total body aches
- headache
- recent onset of any diarrhea, vomiting, or bloody discharge from the mouth or nose
- abdominal or stomach pain
- unusual (spontaneous/non-traumatic) bleeding from any area of the body
- difficulty breathing or shortness of breath
- nasal congestion (blocked nose)
- persistent cough
- sore throat
- runny or stuffy nose

**Note:**  
Symptoms in red should be considered Ebola-essential symptoms to ask.

# IAED EIDS Information

Paramedic Chiefs of Canada  
Chefs Paramédics du Canada

**EMERGING INFECTIOUS DISEASE SURVEILLANCE TOOL (CORONAVIRUS/SRI/MERS/EBOLA)** **IAED**

**Abbreviations**

**EVD** = Ebola Viral Disease  
**EIDS Tool** = Emerging Infectious Disease Surveillance Tool  
**CDC** = Centers for Disease Control, US Gov't  
**WHO** = World Health Organization, UN  
**SRI** = Severe Respiratory Infection  
**MERS** = Middle East Respiratory Syndrome

**EIDS Tool Statement**

The International Academies of Emergency Dispatch's CBRN Fast Track Committee first began issuing updates on the dispatch aspects of Ebola and the Surveillance Tool in early August 2014 and on October 10, 2014, published their Ebola-specific Emerging Infectious Disease (EIDS) Tool for anyone in the world to use.

**Academy Advice on Tool Use**

With the spread of EVD outside of West Africa now appearing unpredictably in new places, the specifics of when to use this Tool and the extent of questioning within this Tool must remain user-defined (Medical Director-controlled wherever possible).

Where a secondary surveillance software, like FirstWatch™, is used, there may be a greater desire to collect more information using this Tool to aid in its predictability features and output. This is a local decision that must be directed by EMS and public health officials and medical control physicians.

**Rules**

1. This Tool does not require a specific order or number of questions to ask. Geographically, areas of recent travel concern can change daily or simply become irrelevant.
2. There are three spaces for "Medical Director-defined" questions for local agency use. Since ProQA cannot recognize these, you must have each question previously defined by Medical Director-approved policy.
3. During EVD emergence, check the IAED's website daily for any new updates or dispatch-related advice until the public health is again stable and assured. Updates to the EIDS Tool may be posted at any time at: [www.emergencydispatch.org](http://www.emergencydispatch.org)
4. There are several questions related to an elevated body temperature – one specifically asking about any measured temperature at or above 100.4°F/38.0°C and 3 other "surrogate" temperature questions: fever (hot to the touch in room temperature), chills, and unusual sweats. Per your agency's policy, a positive answer to any one of these questions can eliminate the need to ask the others.
5. The EIDS Tool is not launched automatically off any Chief Complaint Protocols at this time. IAED recommends the following as 1<sup>st</sup> Tier Protocols to locally consider launching on: 1, 18, 21, and 26. The 2<sup>nd</sup> Tier Protocols include: 6, 10, and 32; however, these designations could change at any time.

Version 5.8.1 AMPDS™ v12.1, 12.2, 13.0, NAE-std, 141020 / 20124

For use under MPDS™ license agreement only © 1979-2020 IAED/Priority Dispatch Corp. All rights reserved. Used by Special Permission.

**EIDS (Coronavirus/SRI/MERS/EBOLA) v5.0.1 1/24/2020**

12

## Public Safety Partners

Paramedic Chiefs  
of Canada  
Chefs Paramédics  
du Canada

- ▶ Police, Fire and EMS all have the possibility of coming into contact with a person with possible 2019–nCoV.
- ▶ Therefore, as partners in public safety, those with policies & procedures in place should assure that their partners who may not have ready access to the information or PPE when encountering a potential patient also have an awareness & plan for encounters. Share your plans, if possible.
- ▶ Refer to local health departments for more assistance.

13

## Reducing the Risk

Paramedic Chiefs  
of Canada  
Chefs Paramédics  
du Canada

- ▶ Use Standard Precautions & if the patient has S/S of fever\* & lower resp. illness (cough, diff. breathing, SOB):
  - Place patient on a surgical mask
  - Ask a detailed travel history in 14 days prior to onset of S/S OR close contact with a patient with or under investigation for 2019–CoV.
- ▶ If hx confirms possible nCoV, add Contact (gown, gloves) AND Airborne (N95respirator) Precautions PLUS face shield or goggles

14

## Reducing the Risk

- ▶ Notify the receiving hospital (per local protocols) of the potential infectious patient Place patient on a surgical mask
- ▶ Minimize contact with patient secretions & use aerosol-generating procedures carefully
- ▶ Properly doff & dispose of PPE per local protocol re-don as indicated.
- ▶ Discard disposable items in biohazardous bags.
- ▶ Clean & Disinfect using an EPA-approved for 2019-nCoV - like coronaviruses
- ▶ Notify appropriate personnel of possible 2019-nCoV exposure & follow the guidance.

15

## Guest Speakers:

### Snohomish County, Washington, USA

Eric Cooper, MD  
Snohomish County EMS  
Medical Program Director

Scott Dorsey  
Assistant Chief/Planning  
Snohomish CountyFire District 7

## Guest Speakers:

Paramedic Chiefs  
of Canada  
Chefs Paramédics  
du Canada

## Snohomish County, Washington, USA

Bob Eastman  
Deputy Chief  
South County Fire

Kurt Mills  
Executive Director  
Snohomish County 9-1-1

17

## First North American Case nCoV

Paramedic Chiefs  
of Canada  
Chefs Paramédics  
du Canada

- ▶ Jan 15: Pt. returns from Wuhan, via SeaTac
- ▶ Jan 16: Pt. becomes ill
- ▶ Jan 19: Pt self-reports, visits clinic, testing initiated
- ▶ Jan 20, 1500 Dx confirmed, coordination of next steps
- ▶ Jan 20, 1800 Coordination of patient transport
- ▶ Jan 20, approx 2300 transport complete
- ▶ Jan 21, 1100, press release

Courtesy Snohomish Health District  
<http://www.snohd.org/485/Novel-coronaviru-2019-response-Jan-15-2>

18

Heraldnet.com

19

## Transport Planning

- ▶ Collaboration
  - EMS agencies
  - Medical Director
  - Public Health Office/liaisons
  - CDC
  - Hospital

20

## Questions

- ▶ Should pt. be transported or stay at home if not seriously ill?
- ▶ If not transported, first responder notification?
- ▶ Can pt drive self?
- ▶ Level of PPE
  - Ebola vs H1N1
  - Opportunity to trial isopod when not mission critical

21

## EMS Notification & Consideration

- ▶ @ Approx. 2000 received a call at home from Dr. Cooper advising of patient in our jurisdiction.
- ▶ Dr. Cooper had been in contact with mutual aid agency that had appropriate equipment for transporting the patient
- ▶ It was very apparent that all involved wanted this event to be treated in strict confidence so as not to elicit any media or public attention

22

## EMS Notification & Consideration

Paramedic Chiefs  
of Canada  
Chefs Paramédics  
du Canada

- ▶ After consult with our operations chief we proposed having patient drive self and we follow. That initially gained traction but then was shot down.
- ▶ My philosophy during the entire event was to use the “lowest common denominator” as my goal.
- ▶ I called the dispatch supervisor on the land line to advise them of the situation. His response to me was “oh, you mean that disease out of China?”
- ▶ Our plan with dispatch was to handle everything over the phone and mobile data computers. No radio traffic.

23

## EMS Notification & Consideration

Paramedic Chiefs  
of Canada  
Chefs Paramédics  
du Canada

- ▶ We all met up at the station with the crew that would do the transport
- ▶ I called the public health representative and requested a unified command be established.
  - Their biggest concern was keeping this quiet and so no unified command was established
  - This was frustrating to me because we needed coordination between pre-hospital, public health, and the hospital

24

## EMS Notification & Consideration

Paramedic Chiefs  
of Canada  
Chefs Paramédics  
du Canada

- ▶ There was a lot of push/pull on what PPE was necessary.
  - The lowest common denominator philosophy paid dividends here.
  - It made us ask critical questions and continually drove us to the most basic answer
  - It kept us from getting too complicated and in the end it paid off
- ▶ Another thing that benefited us was time
  - The hospital needed time to set up (+/- 2 hours)
  - This gave us time to get everything set up as well

25

## EMS Notification & Consideration

Paramedic Chiefs  
of Canada  
Chefs Paramédics  
du Canada

- ▶ The station with the gear was the Haz Mat station
  - This was a benefit because the staff are familiar with varying levels of PPE
  - The crew is comfortable with their PPE and what is needed for the situation
  - The crew is familiar with decon procedures
- ▶ The question I had was what about decon at the hospital?
  - No one had thought of that yet (did we need a Haz Mat team?)
  - Dr. Cooper asked the right questions and got the answers we needed

26

## Pre-flight checklist

Paramedic Chiefs  
of Canada  
Chefs Paramédics  
du Canada

- ▶ Equipment and PPE prepared
- ▶ Conference call with Health Officer
  - Discuss PPE
  - Contact phone #'s incl. Pt.
- ▶ Conference call with receiving hospital
  - Planned entrance and route to iso room
  - Confirm location of patient exchange
    - Outside/in iso room/in isopod
  - Confirm route has unobstructed gurney access

27

## Transport

Paramedic Chiefs  
of Canada  
Chefs Paramédics  
du Canada

- ▶ Contact pt, alert wheels rolling
- ▶ Contact pt, scene arrival
- ▶ Contact pt to come outside and stay by door,  
do not approach responders
- ▶ Pt. into Isopod
- ▶ Scene departure
- ▶ Hospital arrival
- ▶ Transport to room
- ▶ Transfer of care

28

## Post Transport

- ▶ Decon
- ▶ Hotwash

29

## System Debrief

- ▶ Inform local EMS community of North American Pt. one
- ▶ Disseminate CDC/Public Health PPE guidelines
- ▶ Planning with Call/Dispatch Center for surveillance screening
- ▶ Planning for FirstWatch Trigger

30

## Questions Moving Forward

- ▶ EMS standards of care for confirmed cases or cases under investigation
  - Transport only, focus on PPE, no assessments beyond opening airway/applying oxygen (when needed)?
- ▶ Call center confidential marking of locations with confirmed/under investigation cases for EMS notification
- ▶ Call Center screening
  - False positive and negative tracking

31

## 911 ECC Emergency Communications Center

- ▶ Jan-21:
  - Internal review of capabilities
  - Assessment of known details
  - Consultation with IAED CBRN group
  - Establish internal coordination team
  - Consultation with Medical Director
  - Commenced EIDS at 1700

32

## 911 ECC

Paramedic Chiefs  
of Canada

Chefs Paramédics  
du Canada

- Determinants Screened;
  - Difficult Breathing
  - Sick Person (where patient is reporting any flu-like symptoms (cough, diarrhea, fatigue, general sickness))
- Other Determinants Considered but not included:
  - Chest Pain
  - Head Ache

33

## 911 ECC

Paramedic Chiefs  
of Canada

Chefs Paramédics  
du Canada

1. Does the patient have a fever, cough or difficulty breathing?
2. Has the patient traveled to ~~Wuhan City~~<sup>1</sup> China in last 14 days?
3. Has the patient had close contact with someone who is under investigation by health officials (Dr) or has confirmed case of coronavirus?
  - Yes response to 1 & 2 or 1 & 3 considered HIT for elevated risk patient
  - 1: On 1/30 we changed to any china travel.

34

# 911 ECC

- ▶ Elevated Risk patients are confirmed via radio with responders by stating, “Use appropriate PPE”
- ▶ Created FirstWatch Trigger for:
  - Automated alerting of hit (elevated risk pt)
  - QA to validate appropriate use in ECC

One hit out of 100+ EIDS appropriate. False hit from intoxicated caller.

35

# FirstWatch Trigger/QA

36

## Other Notable Points

Paramedic Chiefs  
of Canada  
Chefs Paramédics  
du Canada

- ▶ 1/24: All Fire/EMS/PH/MPD/DEM/ECC Debrief
- ▶ 1/24: Activation of Joint Information System (JIS)
- ▶ 1/27 Debrief for all county law enforcement
- ▶ 1/27–1/30: Hospital strike (unrelated to 2019–nCoV)
- ▶ 1/30 Washington State Dept. of Health directed all 911 ECCs statewide to initiate EIDS

37

## Things That Went Well

Paramedic Chiefs  
of Canada  
Chefs Paramédics  
du Canada

- ▶ Prior connections and collaboration with Public Health made it easy for them to reach out after hours
- ▶ Same is true for EMS Medical Director and the county's 23 Fire based and 2 private Ambulance EMS partners and 911 Call Center
- ▶ Open lines of communication
- ▶ The ability to share opinions and ask questions
- ▶ Mutual respect
